

Creating A .GIF Animation

Step 1)

Download Paint .NET:

Download and install paint.net from <https://www.getpaint.net/>

Step 2)

Download Paint .NET Animated Gif Plugin:

Download and install the .GIF plugin from

<https://forums.getpaint.net/topic/31629-animated-images/>

.dll and .dlc files must be copied to FileTypes folder of the Paint .NET directory.

Step 3)

Create/Upload Image

Get an image divided into each equally-sized frames.

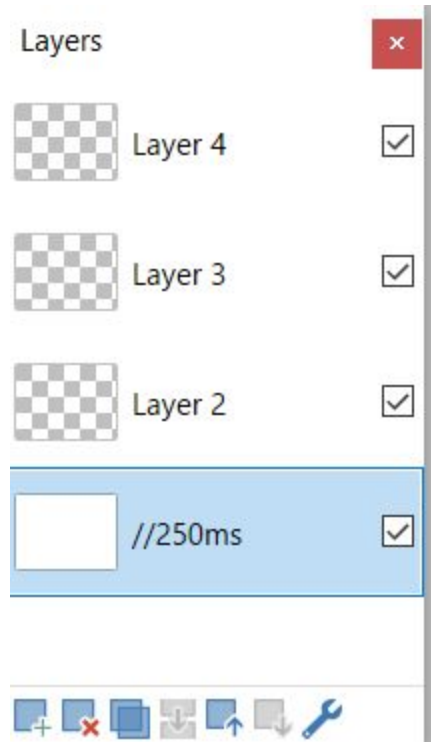

I use paint.net to draw 20x20 pixel animations, then resize them to 400x400

Step 4)

Create Layers

Create a new layer in Paint.NET's 'layer' panel, renaming the bottom one "//xms", where 'x' is a number in milliseconds you want each frame to display.

Step 5)

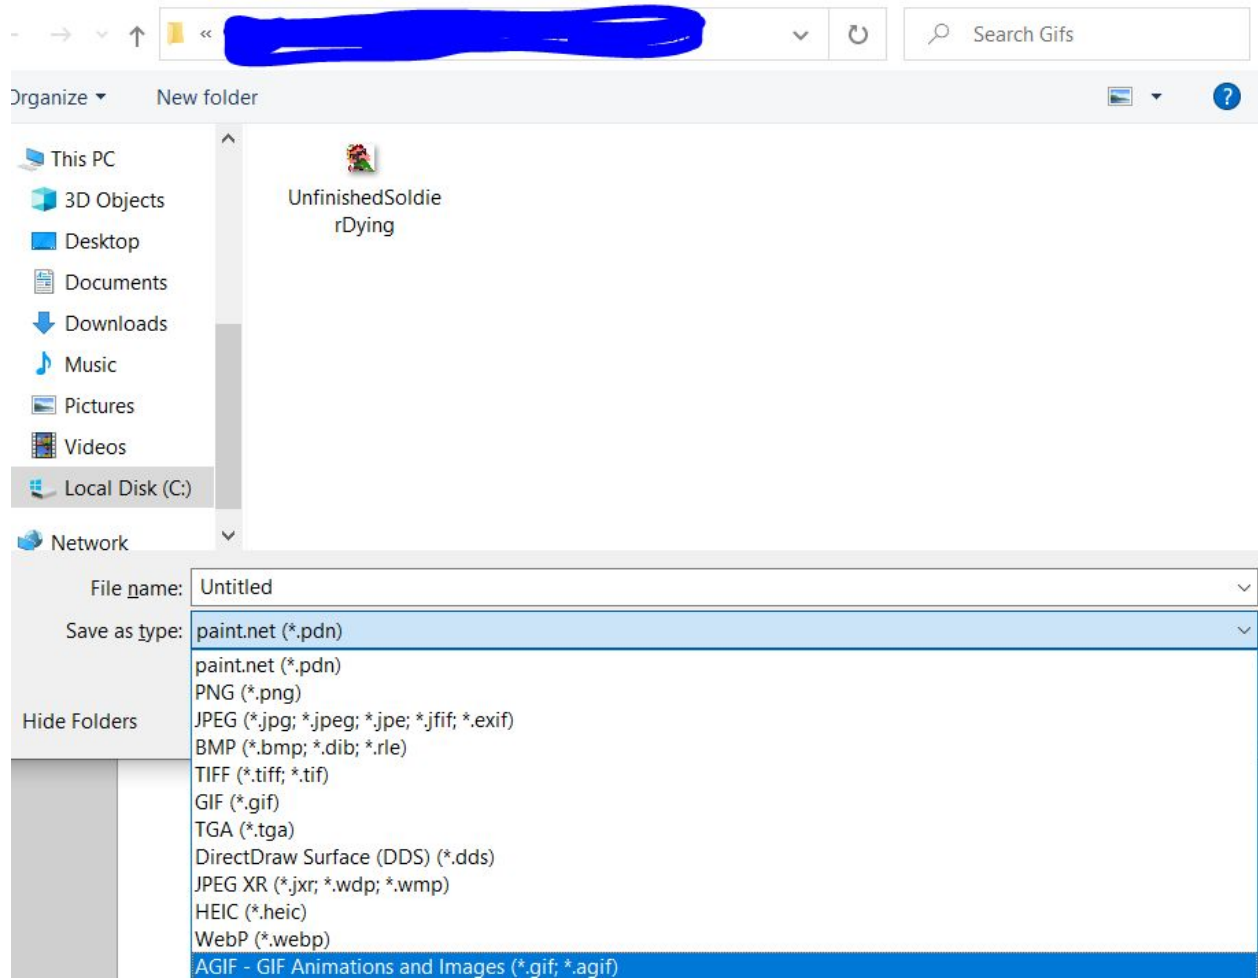

Layer Images

In each Frame, starting from the bottom, paste a single frame of the animation

Step 6)

Save File

Once each layer is in, press File -> Save As, and save as filetype .agif

Press 'OK' in the next menu and Voila, you have a animated .GIF file
